

# PHARMACOVIGILANCE INTERNSHIP

## TASK 2 | ADR REPORTING & DOCUMENTATION

| Prepared by  | Programme / University                                  |
|--------------|---------------------------------------------------------|
| Yogesh Kumar | B.Pharm   Raj Kumar Goel Institute of Technology (AKTU) |

### OBJECTIVE

Complete a structured ADR reporting record from the supplied fictional case scenario, capture the key patient, medicine, reaction, management and reporter fields, and document the case without adding unavailable clinical information.

### FICTIONAL CASE AT A GLANCE

| FIELD                 | CASE ENTRY                                                     |
|-----------------------|----------------------------------------------------------------|
| Patient               | A.K.   34 years   Female   62 kg                               |
| Indication            | Acute bacterial sinusitis                                      |
| Suspected medicine    | Amoxicillin 500 mg orally three times daily                    |
| Therapy dates         | 01/03/2026 - 03/03/2026                                        |
| Reaction              | Generalized itching with pruritic rash                         |
| Onset / recovery      | 03/03/2026 / 06/03/2026                                        |
| Action taken          | Amoxicillin withdrawn; cetirizine given for symptomatic relief |
| Outcome / seriousness | Recovered; non-serious                                         |
| Rechallenge           | Not performed                                                  |
| Concomitant medicines | None reported                                                  |
| Preliminary causality | Probable / Likely                                              |

CONFIDENTIALITY / SCOPE: This is a fictional educational exercise. All patient and reporter details in this portfolio are fictional. It is not a real patient record and is not for clinical decision-making.

## ADR REPORTING FORM

### 1. PATIENT INFORMATION

| FIELD              | CASE ENTRY                     |
|--------------------|--------------------------------|
| Patient initials   | A.K.                           |
| Age / gender       | 34 years / Female              |
| Weight             | 62 kg                          |
| Patient identifier | Initials only (fictional case) |

### 2. SUSPECTED MEDICINE

| FIELD           | CASE ENTRY                |
|-----------------|---------------------------|
| Medicine name   | Amoxicillin               |
| Dose            | 500 mg                    |
| Route           | Oral (PO)                 |
| Frequency       | Three times daily (TID)   |
| Therapy start   | 01/03/2026                |
| Therapy stopped | 03/03/2026                |
| Indication      | Acute bacterial sinusitis |

### 3. ADVERSE REACTION

| FIELD            | CASE ENTRY                            |
|------------------|---------------------------------------|
| Reaction / event | Generalized itching and pruritic rash |
| Date of onset    | 03/03/2026                            |
| Date of recovery | 06/03/2026                            |
| Seriousness      | Non-serious                           |
| Outcome          | Recovered                             |
| Rechallenge      | Not performed                         |

### 4. MANAGEMENT / ACTION TAKEN

| FIELD                          | CASE ENTRY                              |
|--------------------------------|-----------------------------------------|
| Action with suspected medicine | Amoxicillin withdrawn                   |
| Symptomatic treatment          | Cetirizine given for symptomatic relief |
| Clinical course                | Reaction resolved by 06/03/2026         |
| Additional management          | No other management details reported    |

## 5. CONCOMITANT MEDICINES / INVESTIGATIONS

| FIELD                                  | CASE ENTRY                                               |
|----------------------------------------|----------------------------------------------------------|
| Concomitant medicines                  | None reported                                            |
| Investigations                         | Not reported in the supplied case                        |
| Relevant alternative-cause information | No additional alternative cause information was supplied |

## 6. REPORTER INFORMATION

| FIELD           | CASE ENTRY                        |
|-----------------|-----------------------------------|
| Reporter name   | Dr. Meera Sharma (Fictional)      |
| Designation     | Clinical Pharmacist (Fictional)   |
| Contact details | Not provided in the case scenario |

## 7. CASE NARRATIVE

A 34-year-old female (A.K.) received amoxicillin 500 mg orally three times daily for acute bacterial sinusitis. On 03/03/2026, she developed generalized itching and a pruritic rash. Amoxicillin was withdrawn and cetirizine was given for symptomatic relief. The reaction resolved by 06/03/2026. No rechallenge was performed.

## 8. CAUSALITY SNAPSHOT

| FACTOR                   | CASE EVIDENCE                                                               | INTERPRETATION                                       |
|--------------------------|-----------------------------------------------------------------------------|------------------------------------------------------|
| Temporal relationship    | Reaction occurred during amoxicillin therapy and on the treatment stop date | Supports an association                              |
| Dechallenge / withdrawal | Amoxicillin was withdrawn; reaction resolved by 06/03/2026                  | Supports the suspected relationship                  |
| Rechallenge              | Not performed                                                               | No re-exposure evidence                              |
| Alternative explanations | No additional competing explanation supplied                                | No clear competing trigger documented in the case    |
| Reaction pattern         | Generalized pruritic rash / itching                                         | Compatible with a hypersensitivity-type presentation |

## 9. PRELIMINARY ASSESSMENT

### Probable / Likely

The supplied case records a compatible exposure-to-reaction timeline, withdrawal of the suspected medicine, subsequent recovery, and no rechallenge. The assessment remains preliminary because no re-exposure evidence is available and the case is fictional.

## REPORTING PRINCIPLES DEMONSTRATED

| NO. | PRINCIPLE              | HOW THIS REPORT APPLIES                                                                                                         |
|-----|------------------------|---------------------------------------------------------------------------------------------------------------------------------|
| 01  | Patient privacy        | Uses initials for the fictional patient and does not introduce identifying details.                                             |
| 02  | Complete core fields   | Captures reaction dates, suspected medicine, dose, route, frequency, therapy dates, management, outcome and rechallenge status. |
| 03  | Avoid unsupported data | Uses "Not provided" / "Not reported" where the supplied case contains no additional information.                                |
| 04  | Causality wording      | Uses a preliminary "Probable / Likely" assessment and states the evidentiary limits rather than presenting certainty.           |

## SUBMISSION CHECKLIST

|    |                                                                                   |
|----|-----------------------------------------------------------------------------------|
| OK | Fictional educational case clearly labelled                                       |
| OK | Patient, reaction and suspected medicine fields completed                         |
| OK | Therapy dates, management, outcome and seriousness documented                     |
| OK | Rechallenge and concomitant-medicine status documented                            |
| OK | Reporter identity labelled as fictional; unavailable contact details not invented |
| OK | Causality assessment presented as preliminary                                     |

## DECLARATION

All patient details, clinical information, dates, reporter identity and other case-specific information in this exercise are fictional and are used only for educational portfolio practice. No real patient or reporter data are represented.
